Alphametics (cryptarithms)

All these alphametics were (re)discovered by me during my schooldays and student days (the period 1970-75, approximately). The asterisked* ones were used, with my permission, by J.A.H. (Jim) Hunter in his column that appeared in the *Eastern Daily Press* and elsewhere. In some cases Jim Hunter reworded them for publication. Some of the alphametics with mathematical themes appeared in *Eureka*.

All are believed to have unique solutions in base 10, with each letter representing a different digit and no leading zeroes.
